

UHF VHF FM Signal Amplifier

This amplifier is engineered to boost UHF, VHF, and FM signals. It includes multiple output ports, allowing for distribution of amplified signals to various devices, ultimately enhancing signal strength and quality for television and radio.

Product Overview

Professional Signal Distribution

This high-performance amplifier is specifically engineered to enhance signal strength and quality across UHF, VHF, and FM frequency bands. Designed for reliable reception, it features multiple output ports that allow for seamless distribution of amplified signals to several connected devices. It is an ideal solution for professionals requiring stable television and radio performance in diverse signal environments.

Technical Specifications

Port Configuration

- Signal Input (IN)
- Multiple Signal Outputs (OUT)

Supported Bands

UHF, VHF, FM

Distribution Capacity

Yes

Performance Metrics

Primary Function

Signal Boosting • Quality Improvement
