

# UHF VHF FM TV Signal Amplifier

This UHF/VHF/FM amplifier is designed to boost television and radio signals. With a 10dB gain, it enhances signal strength, improving picture and sound quality, making it ideal for areas with weak signals or long cable runs.

## Product Overview

### High-Performance Signal Enhancement

This UHF/VHF/FM signal amplifier is engineered to provide a robust boost to television and radio signals. By delivering a consistent 10dB gain, it effectively compensates for signal loss in long cable runs or improves reception in areas with weak signal coverage. Designed for straightforward integration, this unit serves as a vital component for ensuring high-quality picture and sound clarity in professional broadcasting or residential installations.

## Technical Performance

### Gain Level

**10 dB**

Gain

### Supported Bands

UHF, VHF, FM

## Connectivity

### Interface Ports

- Input port
- Output port

## Application

### Ideal Scenarios

Weak signal areas • Long cable runs • Television reception • Radio signal boosting
