

UHF Wireless Microphone System with 400 Channels

This UHF wireless microphone system operates within a wide frequency band (600MHz-900MHz) and provides 400 channels for flexible setup. It utilizes digital encryption for secure voice and signal transfer, ensuring high consistency and preventing external interference with independent ID codes for each channel.

Overview

Professional UHF Wireless System

The PU-2755 wireless microphone system offers high-performance audio transmission with a total of 400 selectable channels across a broad UHF band. Featuring advanced digital encryption and independent ID coding, this system ensures confidential, interference-free audio with exceptional signal stability. Its ruggedized handheld design and versatile microphone options make it an ideal choice for professional stage performances, large meetings, and outdoor events.

System Specifications

Total Channels	400
Frequency Range	620-950MHz
Working Distance	60 m

Audio Performance

Featured Audio Metrics

100 dB Dynamic Range	98 dB S/N Ratio	0.3 % THD
