

UL 10064 Teflon Insulated Electronic Twist Cable

This super fine electronic wire offers superior heat resistance, cold resistance, chemical stability and solvent resistance. The product is designed for high temperature environments, ensuring excellent performance and meeting specific connection requirements.

Product Overview

High-Performance Electronic Connectivity

The UL 10064 Teflon insulated electronic twist cable is engineered for the internal connection of sophisticated electronic equipment. Featuring a durable tinned copper conductor and advanced FEP insulation, this cable offers reliable performance in demanding environments. It adheres to rigorous industry standards including UL758 and UL1581, ensuring consistent signal integrity and thermal stability for professional applications.

Technical Specifications

Rated Temperature	105 °C
Rated Voltage	30 V
Conductor Material	Tinned copper
Insulation Material	FEP (Fluorinated Ethylene Propylene)

Compliance and Standards

Compliance	RoHS, UL 758, UL 1581, UL AWM 10064
------------	-------------------------------------

Applications

Recommended Use

- Internal connection of electronic equipment
- Communication product wiring
- High-temperature electronic assemblies
