

Ultra Clear TV Panel

The Ultra Clear TV Panel reduces light reflection for enhanced color contrast. It ensures deep blacks and vibrant colors even in low light.

Product Overview

Ultra Clear Panel Technology

The Ultra Clear TV Panel represents a significant advancement in display technology, engineered to minimize light reflection and optimize visual fidelity. By refining surface structures, this panel prevents the scattering of external light, which allows for deeper black levels and richer color saturation. This provides a superior viewing experience that remains vibrant and clear, even in environments with challenging lighting conditions.

Technical Performance

Key Performance Indicators

100 %

Reflection Reduction

1 High

Color Contrast Enhancement

Optical Advantages

- Reduced light reflection from external sources
- Enhanced color contrast and depth
- Improved black level performance
- Maintains color vibrancy in low-light environments

Standards

Display Technology Type

Ultra Clear Panel • High Contrast LCD • Anti-Reflective
