

Ultra Low Temperature Freezer -86°C

This ultra-low temperature freezer is designed for the safe and reliable storage of biological samples and vaccines. It maintains temperatures as low as -86°C with a robust refrigeration system and includes alarms for temperature deviations and power failures.

Overview

Professional Grade Cold Storage

This ultra-low temperature freezer is engineered for the secure and reliable preservation of biological samples, vaccines, and other critical temperature-sensitive materials. It features a robust refrigeration system capable of maintaining stable temperatures down to -86°C. Designed for laboratory environments, the unit combines precise digital control with high-quality insulation to ensure sample integrity and energy efficiency.

Performance

Operating Temperature

-86 °C

Minimum Temperature

Safety & Control

Alarm Systems	Audible Alarm, Visual Alarm, Temperature Deviation Alert, Power Failure Alert
Security	Yes

Design & Mobility

Insulation Standard	High-Efficiency Insulation
Mobility	Equipped with casters for easy positioning and transport
