

Underbone Motorcycle with Step-Through Frame

This motorcycle features a step-through frame, commonly known as an underbone or cub bike. It is designed for urban commuting and fuel efficiency.

Overview

Urban Commuter Efficiency

This underbone motorcycle features a practical step-through frame design optimized for daily urban commuting. Engineered for reliability and fuel efficiency, it combines a compact four-stroke engine with a lightweight build. The inclusion of essential features like a rear luggage rack and stable braking systems makes it a versatile solution for city transport.
