

Underground Coal Mining Pick

These coal mining picks are designed for efficient cutting in underground operations. They feature robust materials and precise geometries to withstand harsh mining conditions, ensuring optimal cutting efficiency and reduced downtime.

Product Overview

High-Performance Conical Picks

These conical picks are engineered specifically for demanding coal mining and tunneling operations. Utilizing advanced manufacturing technology and premium raw materials, they are designed to deliver exceptional abrasive and impact resistance. This robust construction ensures a long service life and high work efficiency, helping to reduce operational downtime in harsh underground environments.

Technical Specifications

Available Shank Sizes

- 30mm
- 35mm
- 38mm
- 43mm

Key Performance Features

High Abrasive Resistance, High Impact Resistance, Long Service Life, High Work Efficiency

Application

Intended Use

Coal mining and tunneling operations
