

Uninterruptible Power Supply Units

These uninterruptible power supply (UPS) units provide backup power to connected devices in the event of a power outage. They protect against data loss and hardware damage by ensuring continuous operation.

Product Overview

Reliable Power Protection

These uninterruptible power supply (UPS) units are designed to ensure seamless power continuity for professional equipment during outages. By providing immediate backup energy, they effectively prevent data loss and mitigate the risk of hardware damage caused by unexpected shutdowns. The versatile design makes them suitable for diverse environments, ranging from small office workstations to more power-demanding operational setups.

Key Features

Core Functionalities

- Emergency power backup
- Equipment damage prevention
- Data loss mitigation
- Real-time status monitoring

Status Indicators

Indicator Lights, Monitoring Display

Product Versatility

Use Case Suitability

Small Office • Data Protection • Demanding Applications
