

# Uninterruptible Power Supply (UPS)

This uninterruptible power supply provides backup power to ensure the continuous operation of connected devices during power outages, which prevents data loss and hardware damage. It features automatic voltage regulation and surge protection to stabilize voltage fluctuations and guard against power spikes.

## Product Overview

### Reliable Backup Power Solutions

These uninterruptible power supply systems are engineered to provide essential backup power during outages, ensuring the continuous operation of your critical hardware. Featuring integrated automatic voltage regulation and surge protection, they actively safeguard against power spikes and fluctuations. Designed for scalability, these units support a wide range of applications from standard office equipment to mission-critical server infrastructure.

## Technical Features

### System Performance

**1 AVR**

Voltage Stabilization

**100 %**

Protection Status

### Key Capabilities

Automatic Voltage Regulation, Surge Protection, Battery Monitoring System, Remote Management

## Management and Interface

### Connectivity and Control

- User-friendly status interface
- Remote management communication ports
- Battery health monitoring alerts
- Configuration control panel

### Target Applications

Office Equipment • Server Infrastructure • Hardware Protection
