

Uninterruptible Power Supply (UPS) System

This uninterruptible power supply (UPS) system provides reliable backup power for critical equipment during power outages or voltage fluctuations. Designed for continuous operation, it ensures seamless transition to battery power, preventing data loss and system downtime.

Product Overview

Reliable Power Protection

The Uninterruptible Power Supply (UPS) system is designed to provide seamless backup power for critical equipment during outages or voltage fluctuations. It ensures business continuity by preventing data loss and system downtime through a rapid transition to battery power. This unit is perfectly suited for high-stakes environments such as data centers, server rooms, and industrial applications that demand dependable, continuous operation.

Technical Specifications

Recommended Applications

- Data Centers
- Server Rooms
- Industrial Equipment

Core Features

Advanced Battery Management, Surge Protection, Remote Monitoring, Continuous Operation

Model Identifier

UPS-10
