

Uninterruptible Power Supply (UPS) Unit

This unit provides backup power in the event of a power outage. It protects sensitive electronic equipment and prevents data loss.

Product Overview

Professional Backup Power Solutions

This uninterruptible power supply (UPS) system is designed for robust performance in demanding B2B environments. Featuring both tower-style and rack-mountable configurations, these units provide critical backup power to safeguard sensitive electronic equipment against outages and voltage instability. With integrated digital monitoring and advanced thermal management, these devices ensure high availability for your mission-critical data and hardware.

Technical Specifications

Available Configurations	Tower, Rack-mountable
Cooling System	Yes

Monitoring and Display

Display Type

- Digital real-time status display
- Visual indicator lights
