

Uninterruptible Power Supply with Automatic Transfer Switch

This uninterruptible power supply provides continuous power to critical systems during outages. It features automatic transfer switching for seamless transition to battery power and protects connected equipment from damage.

Overview

Continuous Power Protection

The UPS ATS3 is a robust uninterruptible power supply engineered to provide seamless backup power for mission-critical systems. Equipped with an automatic transfer switch, it ensures instantaneous transition during outages or power fluctuations. This rack-mountable solution provides essential surge protection and voltage regulation to safeguard sensitive electronic equipment in industrial, telecommunications, and IT environments.
