

# Unitary Cold Storage Equipment

This unitary cold storage equipment is designed for refrigeration applications. It features a compact design with integrated components, top-mounted fans, a control panel, and a robust enclosure.

## Product Overview

### Unitary Cold Storage Solutions

The TC series unitary cold storage equipment is designed for efficient refrigeration applications in industrial and commercial environments. These units feature a compact, integrated design that simplifies installation and operation. With robust enclosures and precise temperature management controls, these units ensure reliable performance for maintaining cold storage conditions.

## Technical Specifications

### Available Models

- TC20D
- TC10G

### Application

Refrigeration, Cold Storage, Industrial, Commercial

## Design Features

### Key Design Features

Compact Design • Integrated Components • Top-Mounted Fans • Robust Enclosure

## Control Systems

### Control Features

Integrated control panel for precise temperature management
