

Universal Cutter Grinding Machine

The universal cutter grinding machine is a versatile tool designed for the precision grinding of various cutters. It features adjustable grinding heads and worktables to accommodate different tool geometries.

Product Overview

Precision Grinding Solution

The Universal Cutter Grinding Machine is a highly versatile tool engineered for the precision sharpening and maintenance of various industrial cutters. Designed with robust construction to ensure stability and accuracy, it features adjustable grinding heads and worktables to handle diverse tool geometries with ease. The integrated coolant system maintains optimal temperatures during operation, ensuring consistent high-quality results and significantly extending the service life of your cutting tools.

Technical Capabilities

Adjustment Features

- Adjustable grinding head angle
- Adjustable worktable position
- Integrated coolant flow system

Supported Cutting Tools

Milling Cutters, End Mills, Drills

Machine Specifications

Model Series

KXM10B • KXM10C

Build Quality

Robust heavy-duty construction
