

Urban Rail Transit System

This urban rail system provides a clean alternative to car transportation. It offers cities an efficient transport solution to accommodate traffic needs while offering operating flexibility and environmental harmony.

System Overview

Turnkey Urban Transit Solutions

This urban rail transit system provides a clean, efficient alternative to traditional road transportation for metropolitan areas. As a comprehensive turnkey solution, it encompasses the design, construction, and maintenance of complete metro and light rail networks. The system is engineered to enhance operating flexibility while maintaining environmental harmony in dense urban settings.

System Components

Included Infrastructure

- Rolling stock
- Track infrastructure
- Passenger stations
- Signaling systems
- Electrification systems
- Maintenance workshops

System Capabilities

Supported Transit Modes

Metro • Light Rail Transit

Service Scope

Financing, Design, Construction, Commissioning, Maintenance
