

# Used Wave Soldering Machine for PCB Assembly

This used wave soldering machine is designed for automated soldering of electronic components onto printed circuit boards. It features a conveyor system, solder pot, and wave generation mechanism.

## Overview

### Professional Wave Soldering System

This used wave soldering machine is an essential solution for automated component attachment in PCB assembly. Designed for reliability, the system features a robust conveyor and precise solder pot controls, making it well-suited for small to medium-sized manufacturing operations. With adjustable wave height and temperature settings, it ensures consistent soldering quality across production cycles.

## Technical Details

Model Type	WAVEKRAFT 330
Serial Number	0508001

## Electrical Specifications

### Power Requirements

**400 VAC**  
Voltage

**16 A**  
Rated Current

**60 Hz**  
Frequency

## Compliance and Features

### Key Features

- Adjustable conveyor speed
- Precise solder temperature control
- Adjustable wave height mechanism
- Automated PCB assembly process

Certifications	CE
