

Utility Motorcycle

These motorcycles are designed for utility and general transportation purposes. They feature standard motorcycle components and rear carriers.

Overview

Versatile Utility Motorcycle

The SL125-2 series is designed as a robust utility motorcycle tailored for general transportation and daily work tasks. Featuring a reliable build with practical additions like rear carriers and durable chrome accents, these bikes are engineered to handle varied operational demands. With multiple trim configurations available, including different front fairings and handlebar setups, this model offers flexibility to suit specific user requirements.
