

UTP Cat5e Ethernet Cable

UTP Cat5e cable is used for data transmission in various market areas due to its competitive price and good signal reception. It features twisted pair conductors for reduced interference and a durable outer jacket for protection.

Product Overview

High-Performance Networking Solution

This UTP Cat5e Ethernet cable is designed to provide reliable, high-speed data transmission for professional networking environments. Utilizing unshielded twisted pair technology, it ensures signal integrity by effectively reducing interference. Its durable outer jacket and convenient integrated rip-cord make it an ideal choice for efficient installation in offices and home network infrastructures.

Technical Specifications

Construction Features

- Twisted pair conductors
- Integrated rip-cord
- Durable protective outer jacket

Cable Category	Cat5e
Shielding	Unshielded Twisted Pair (UTP)

Market Compatibility

Primary Applications	Ethernet Networking, Office Infrastructure, Residential Networks
----------------------	--
