

UV Flatbed Printer for Rigid and Flexible Substrates

This high-precision UV flatbed printer is designed for direct printing on a variety of rigid and flexible substrates. It features variable droplet printheads, a multi-zone vacuum bed, and a UV LED curing system, and is capable of printing CMYK plus white and varnish.

Product Overview

Professional UV Flatbed Printing Solution

This high-precision UV flatbed printer is engineered for versatile direct printing on both rigid and flexible substrates. It utilizes an advanced UV LED curing system to ensure instant drying and durable, high-quality output. The system supports multi-layered printing, including CMYK, white, and varnish, making it an ideal choice for signage, promotional items, and industrial marking applications.

Key Features

Core Capabilities

- Multi-zone vacuum bed for secure media stabilization
- Variable droplet printheads for enhanced detail
- UV LED curing for instant drying
- CMYK + White + Varnish ink support

Primary Applications

Signage, Display Graphics, Promotional Items, Industrial Marking
