

Vacuum Brake Booster

This vacuum brake booster enhances braking efficiency. It multiplies the force applied to the brake pedal, making it easier to stop the vehicle.

Product Overview

High-Performance Vacuum Brake Booster

This vacuum brake booster serves as a critical component in automotive braking systems, designed to significantly multiply the force applied by the driver to the brake pedal. By utilizing vacuum pressure from the engine to create a differential across an internal diaphragm, it ensures smooth, reliable, and efficient stopping power. This unit is engineered for compatibility with various light trucks and passenger vehicles, enhancing overall driving safety.

Technical Details

Operating Principle

Vacuum-assisted • Diaphragm-based

Component Type

Vacuum-operated brake booster

Compatibility

Compatible Part Numbers

- MB-895103
- 44610-35680
- 44610-3D730
- 44610-3D091
- 44610-60030
- 44610-02030
