

Vacuum Cleaner Universal Motor

This universal motor is designed for high-speed applications such as vacuum cleaners. It features an optimized fan design for efficient cooling and durable construction for an extended operational life.

Overview

High-Performance Universal Motor

This universal motor is engineered specifically for high-speed applications, offering reliable performance and consistent suction power for vacuum cleaner systems. It features a robust armature and an optimized fan design that ensures efficient cooling during extended operation. Designed for durability, this motor is a dependable component for demanding cleaning equipment.

Technical Specifications

Power Output

1200 W

Rated Power

Rated Voltage

220-240V AC

Frequency

50/60 Hz

Compliance & Protection

Insulation Class

Class B

Protection Class

IP20

Applications

Primary Use Cases

- Vacuum cleaner motor
- High-speed industrial applications
