

Vacuum Forming Paper Machinery

This paper machinery appears to be a vacuum forming or exposure unit, likely used in the production of paper-based products or printing plates. It features a hinged lid with a dark interior and a control panel with gauges and switches.

Overview

Precision Vacuum Forming Machinery

This industrial-grade vacuum forming and exposure unit is engineered for high-precision paper processing and printing plate production. Featuring a robust, stable design with a dedicated control interface, it allows operators to manage vacuum sealing and exposure cycles with accuracy. It is an essential solution for facilities requiring consistent shaping and pattern reproduction in paper-based materials.

Technical Specifications

Control System

- Manual gauge monitoring
- Adjustable process switches
- Integrated process control panel

Process Capability

Vacuum Forming, Exposure Unit

Construction

Heavy-duty yellow frame and support structure

Lid Design

Yes
