

Variable Valve Timing Actuator for Honda Engines

Variable valve timing (VVT) actuator optimizes engine performance. It dynamically adjusts valve timing based on operating conditions.

Product Overview

Optimizing Engine Performance

This Variable Valve Timing (VVT) actuator is engineered for precise dynamic adjustment of valve timing in compatible Honda engines. By continuously optimizing timing based on real-time operating conditions, it significantly enhances engine efficiency and overall performance. Built with a robust gear design, this component ensures long-term reliability and accurate control for demanding automotive applications.

Technical Details

Compatibility

Honda Engines

Design Features

- Robust gear design
- Dynamic valve timing adjustment
- High-precision actuator mechanism

OE Reference Numbers

14310-R44-A01, 14310-R5A-305
