

Vegetable Cleaning and Peeling Machine

This machine efficiently cleans and peels root vegetables such as ginger, potatoes, and carrots. Its stainless steel build and roller system ensure hygiene and minimize waste.

Overview

High-Efficiency Root Vegetable Processing

This multifunctional cleaning and peeling machine is designed for the continuous processing of root vegetables such as ginger, potatoes, and carrots. Built with high-quality stainless steel, the unit ensures hygiene and durability, featuring a rolling brush system made of abrasion-resistant nylon cord. It offers high capacity and low power consumption, making it an ideal solution for large-scale industrial vegetable preparation.

Key Features

Construction Materials

Stainless Steel • Nylon Cord Brushes

Suitable For

Ginger, Potato, Carrot, Shells

Performance Metrics

Performance Highlights

3000 kg/h
Max Capacity

3 kw
Max Power

Technical Specifications

Model Specifications

Model	Rollers	Capacity (kg/h)	Power (kw)	Weight (kg)
FDQP-1800	8	500-800	1.1	300
FDQP-2400	8	800-1500	1.5	400
FDQP-2400B	11	2000-3000	3	500

Operating Voltage

380V
