

Vehicle Front or Rear Axle Assembly

Front and rear axle components are essential for vehicle suspension and steering systems. These parts are constructed from durable materials to ensure stability and control.

Product Overview

High-Performance Axle Assemblies

These axle assemblies are precision-engineered components designed for critical vehicle suspension and steering systems. Built with robust, black-coated metal construction, they provide essential structural integrity and stability for the vehicle chassis. Each unit features multiple mounting points for reliable integration, ensuring durability and precise fitment across a range of automotive models.

Compatibility & Fitment

Part Compatibility Matrix

| Vehicle Model | Axle Position | Part Number |
|----------------|---------------|---------------------|
| 301 | Front | 9678083580 |
| 301 | Rear | 1610381580 |
| 206 | Front | 3502Z6 |
| 307 (1.6/2.0) | Front | 3502GR / 9808957180 |
| 307 | Rear | 1611246480 |
| 3008 (1.6/2.0) | Front | 3502FT / 9683059780 |
| 3008 | Rear | 1609656680 |
| 508 | Front | E9675435180 |

Technical Features

Design Highlights

- Multiple mounting points for secure integration
- Engineered for suspension and steering stability
- Precision-fit chassis interface
- High-durability structural design

Construction

Black-coated metal, Reinforced steel, Durable finish
