Overview

Independent Heating Solution

The Vehicle Parking Heater System is an independent in-vehicle heating device that operates separately from the car engine. It allows for the preheating of both the engine and the cab in cold environments without needing to start the engine. This process eliminates cold start wear, extends engine life, and ensures a comfortable cabin environment.

Application

Compatible Vehicles

Cars, Buses, Construction Vehicles, Yachts

System Components

Included Components

- Heater unit
- Exhaust muffler
- Fuel pump
- Fuel filter
- Control unit
- Mounting accessories
