

Vehicle Weighing Apparatus

This is a vehicle weighing apparatus used for measuring vehicle weight. It includes a platform with electronic sensors and safety barriers.

Product Overview

Industrial Vehicle Weighing Solution

This vehicle weighing apparatus is designed for precision and reliability in high-traffic environments such as checkpoints and toll stations. Featuring a road-embedded platform, it seamlessly integrates with electronic sensors to deliver accurate weight measurements. Built for durability in demanding conditions, the system includes protective safety bollards and barriers to guide traffic and safeguard the infrastructure.

Technical Specifications

System Components

- Road-embedded weighing platform
- Integrated electronic sensors
- Instrumentation unit
- Safety bollards
- Traffic barriers

Key Operational Benefits

Embedded Design • High Accuracy • Traffic Control Integration • Durable Construction

Suitable Environments

Toll Stations, Checkpoints, High-Traffic Areas, Outdoor Industrial
