

Ventilated Brake Disc Rotor with Caliper Assembly

This high-performance brake system features a ventilated disc rotor and a robust caliper assembly. The rotor is designed for efficient heat dissipation, ensuring consistent braking performance under demanding conditions.

Overview

High-Performance Braking System

This ventilated brake disc rotor and caliper assembly is engineered for superior heat dissipation and consistent braking performance under demanding conditions. Designed for automotive applications, the system features a robust caliper housing high-friction brake pads to deliver optimal stopping power. The integrated hub with wheel studs ensures secure and reliable wheel mounting for professional automotive requirements.

Technical Specifications

Component Type	Ventilated Brake Disc Rotor with Caliper Assembly
Key Features	Ventilated Design, High-Friction Pads, Integrated Hub, Heat Dissipation
Application	Automotive

Performance Metrics

Performance Highlights

1 High

Heat Dissipation Efficiency

1 Optimal

Stopping Power
