

Vernier Caliper

This precision measuring instrument is used for accurate linear measurements. It features a main scale and a vernier scale for precise readings down to 0.02mm.

Product Overview

Precision Measurement Solution

This high-precision vernier caliper is designed for accurate linear measurements in engineering, manufacturing, and quality control environments. Constructed from durable carbon steel, it features hardened measuring surfaces and a smooth sliding mechanism for reliable performance. The instrument allows for detailed internal and external dimension assessments with high-resolution readings.

Technical Specifications

Measurement Precision

0.02 mm
Resolution

Material

Carbon Steel

Capabilities

Internal Measurement, External Measurement, Linear Measurement

Applications

Recommended Industries

- Engineering
- Machining
- Quality Control
- Manufacturing
