

Vertical Automatic Slitting and Rewinding Machine

This vertical slitting and rewinding machine is designed for efficiently slitting and rewinding various materials. It features automatic tension control, ensuring consistent and precise slitting results.

Product Overview

High-Efficiency Slitting and Rewinding

The Vertical Automatic Slitting and Rewinding Machine offers a high-performance solution for processing materials like paper, film, foil, and laminates. Designed with a space-saving vertical configuration, it features automatic tension control and precise edge positioning for consistent results. This robust machine is an ideal choice for the packaging, printing, and converting industries looking to optimize their production workflow.

Technical Specifications

Motor System	Equipped with inverter for precise speed regulation
Control Cabinet	Separated General Control Cabinet for flexible and easy operation

Unwinding System

Unwinding Features	Automatic EPC, Air Shaft, Magnetic Powder Brake, Auto Tension Controller
--------------------	--

Rewinding System

Rewinding Features	Air Shaft, Magnetic Powder Clutch, Pressure Roller
--------------------	--

Operational Features

Automation Capabilities

- Automatic meter counting device
- Air trim discharge conveying system
- Photocell for line/edge tracking

Optional Add-ons

Frictional cam shaft • Disk knife

Application Suitability

Compatible Materials	Paper, Film, Foil, Laminates
----------------------	------------------------------
