

Vertical Axis Wind Turbine Generator

This wind generator features a vertical axis wind turbine (VAWT) configuration, enabling it to capture wind from any direction. Mounted on a raised platform, it maximizes wind exposure for efficient energy conversion in urban settings.

Overview

Urban Energy Solution

This vertical axis wind turbine (VAWT) is engineered for high performance in urban environments where space is limited and wind direction is inconsistent. Its specialized design allows for the efficient capture of wind from any direction, eliminating the need for mechanical yaw mechanisms. Built with a robust steel structure and integrated safety cage, this generator is an ideal sustainable energy solution for rooftop installations.

Technical Specifications

Configuration	Vertical Axis Wind Turbine (VAWT)
Primary Material	Steel

Design Features

Key Attributes	Omni-directional, Rooftop Compatible, Integrated Safety Cage, Urban-Optimized
