

Vertical CNC Drilling and Tapping Machining Center

This high-speed vertical machining center is designed for drilling and tapping operations. It features a rigid structure, a high-speed spindle, and an automatic tool changer to increase productivity.

Product Overview

High-Speed Drilling and Tapping Center

The VTC series is a high-performance vertical machining center specifically engineered for drilling and tapping operations. Its rigid design ensures long-term structural stability while facilitating efficient material removal at high speeds. Equipped with advanced CNC control and an automatic tool changer, this system is optimized for high-productivity environments in the automotive, aerospace, and electronics sectors.

Technical Specifications

Model	VTC4530
Machine Type	Vertical CNC Drilling and Tapping Machining Center
Applicable Industries	Automotive, Aerospace, Electronics

Key Performance Features

Operational Efficiency

1 Included

Automatic Tool Changer

Performance Advantages

- High-speed spindle for rapid material removal
- High-precision machining capabilities
- Rigid structure for enhanced stability
- Advanced CNC control system integration
