

# Vertical CNC Milling Machine

This vertical CNC milling machine is designed for precision metal cutting operations. It features a robust frame for stability and accuracy, along with a numerical control system for automated machining processes.

## ADDITIONAL IMAGES

## Overview

### High-Precision Vertical CNC Milling

The XH7126 is a compact vertical CNC milling machine designed for high-efficiency machining operations including drilling, tapping, and milling. It features a robust spindle frame integrated into the pedestal to ensure maximum stability and stiffness during heavy-duty tasks. This CE-certified machine combines aesthetic modeling with professional-grade performance for versatile metalworking applications.

## Core Performance

### Spindle Specification

**40 BT**

Spindle Taper

## Capabilities

### Machining Functions

- Drilling
- Tapping
- Chamfering
- Bearing
- Milling face thread
- Handle and tower machining

## Technical Features

### Operational Efficiency

Automatic Knife Changing • High-Speed Spindle • Numerical Control System

## Design & Build

### Build Quality

- Integrated spindle frame and pedestal for enhanced stiffness
- Enclosed workspace for operator safety
- Robust frame for vibration dampening
- Aesthetic and elegant modeling

## Compliance

### Certifications

CE

## Material Compatibility

### Suitable Materials

Metals, Plastics, Composites
