

Vertical Complex Material Crusher

This vertical complex crusher is a robust machine designed for crushing materials in mining and industrial applications. Its vertical design allows for a compact footprint and optimized material flow.

Product Overview

Innovative Crushing Technology

The PFL series vertical compound crusher represents an optimized design developed through extensive practical experience and international technology standards. It features a unique mechanism that combines impact and grinding forces simultaneously, allowing for higher crushing efficiency with reduced energy consumption. As a national invention patent winner, this equipment is engineered for professional use in steel metallurgy, construction, chemical industries, and mineral processing.

Certifications

Standards & Compliance

ISO 9001, CE, SGS, TÜVRheinland, BUREAU VERITAS

Performance

Crushing Methods

- Impact Crushing
- Grinding

Applications

Suitable Industries

- Iron and Steel Metallurgy
- Construction
- Building Materials
- Chemical Industry
- Mining
