

Vertical Drilling Machines

These vertical drilling machines are engineered for precise metalworking tasks. They feature a rigid frame, powerful motor, and versatile worktable suitable for diverse drilling applications.

Product Overview

Industrial Vertical Drilling Performance

The Z5035A, Z5040A, and Z5050A series are robust vertical drilling machines engineered for high-precision metalworking environments. These units feature a rigid structural frame and powerful motor systems designed to handle diverse industrial drilling applications with consistent accuracy. Equipped with variable spindle speeds and an integrated coolant system, they optimize tool life and production efficiency for professional workshops.

Performance Features

- Variable spindle speed control
- Adjustable drilling depth
- Integrated cooling system
- High-rigidity frame construction

Available Models

Z5035A • Z5040A • Z5050A
