

Vertical Emery Roll Grain Whitener

This machine offers multiple options for feeding and discharging, providing flexible configuration. It is designed for high-performance whitening of grains such as rice, utilizing a vertical emery roll for efficient and uniform processing.

Overview

High-Performance Grain Whitening

This vertical emery roll grain whitener is engineered for high-efficiency processing of grains like rice. Its vertical configuration ensures uniform whitening while minimizing breakage to maximize your overall yield. Designed for industrial reliability, it features adjustable intensity settings and robust construction for consistent performance in demanding environments.

Technical Specifications

Whitening Mechanism	Vertical Emery Roll
Adjustable Intensity	Yes

Features

Operational Benefits

- Uniform whitening performance
- Minimized grain breakage
- Maximized processing yield
- User-friendly interface
- Easy maintenance and cleaning
- Integrated safety features

Build Quality	Robust Construction, Industrial Grade, High Reliability
