

Vertical Form Fill Seal Packaging Machine with Multi-Head Weigher

This machine integrates vertical form fill seal (VFFS) packaging with multi-head weighing for automated bagging. It is designed for accurately weighing and packaging granular products like snacks and nuts.

Product Overview

Automated Packaging Solution

This Vertical Form Fill Seal (VFFS) packaging machine is engineered for the precise automated packaging of granular and free-flowing solids, such as snacks, nuts, and confectionery. The integrated system combines a feeding elevator, a high-precision multi-head weigher, and a bagging unit to streamline the production process from weighing to sealing. Built with stainless steel for hygiene and durability, this system ensures consistent, high-speed performance suitable for food and pharmaceutical applications.

Technical Specifications

Weigher Configuration	Multi-head (10 or 14 head)
Construction Material	Stainless Steel
Temperature Control	Intellectual temperature controller
Suitable Materials	Solid materials, Candy, Confectionery, Chocolate, Granular products, Seeds, Nuts

Standard Compliance

Operational Advantages

- High-precision weighing accuracy
- Neat sealing quality
- Adjustable bag sizes
- User-friendly interface
- High-speed operation
