

Vertical Glass Washing and Drying Machine

This vertical machine efficiently washes and dries glass sheets. It utilizes a multi-stage process to ensure clean surfaces, accommodating various glass sizes and thicknesses with adjustable settings.

Product Overview

High-Efficiency Glass Processing

This vertical glass washing and drying machine is engineered for the precise and efficient cleaning of glass sheets. It utilizes a comprehensive multi-stage process, incorporating dedicated washing, rinsing, and drying phases to ensure a spotless finish every time. With highly adjustable parameters, operators can customize cleaning cycles to accommodate various glass sizes and thicknesses, making it an essential asset for architectural and automotive glass production.

Technical Capabilities

Process Stages

- Washing
- Rinsing
- Drying

Control Features

Adjustable Parameters • Customizable Cycles

Application Compatibility

Architectural Glass, Automotive Glass, Glass Processing Plants
