

Vertical Honing Machine for Metal Finishing

This vertical honing machine is designed for precision metal grinding and finishing. It is ideal for machining engine blocks and similar components requiring high accuracy and surface quality.

Overview

High-Precision Metal Finishing

The TH170D Vertical Fine Honing Machine is engineered for professional metal grinding and surface finishing applications. It is specifically designed to meet the high accuracy requirements of complex components such as engine blocks. With its robust structural frame and advanced control interface, this machine delivers consistent, high-quality honing results for demanding industrial tasks.

Technical Specifications

Model	TH170D
Machine Type	Vertical Fine Honing Machine
Primary Applications	Precision Metal Grinding, Surface Finishing, Engine Block Machining

Features

Equipment Highlights

- Robust structural frame design
- Advanced electronic control system
- High-precision honing head assembly
