

# Vertical Immersion Pump for Liquids

The DVV series vertical immersion pump is designed for pumping liquids from tanks and containers. It features a vertical design, allowing the pump to be submerged directly into the liquid.

## Overview

### Vertical Immersion Pump for Industrial Applications

The DVV series vertical immersion pump is engineered for efficient liquid transfer from tanks and containers. Its vertical design allows for direct submersion, making it an ideal solution for installations where space is constrained or the liquid source is below the mounting level. Constructed with durable materials, this pump provides excellent chemical resistance and reliability for demanding environments such as wastewater treatment, chemical processing, and general fluid transfer.

## Technical Specifications

Pump Type	Vertical Immersion Pump
Series	DVV Series

## Application & Suitability

### Installation Benefits

- Space-saving vertical design
- Direct submersion capability
- Suitable for below-level liquid sources

Suitable Industries	Chemical Processing, Wastewater Treatment, Fluid Transfer
