

Vertical Lifting Elevator for Multilevel Transport

This elevator provides vertical transportation in multi-story buildings. It facilitates the movement of people or goods between different levels.

Overview

Efficient Multilevel Transport

This vertical lifting elevator is engineered for reliable and efficient material transport across multiple levels. Designed with robust industrial standards, it facilitates seamless vertical movement of heavy loads within warehouse or manufacturing environments. Its durable construction ensures consistent performance for high-demand operational workflows.

Technical Specifications

Load Capacity

1000 kg
Rated Load

Drive Mechanism

Chain Drive

Application

Material Handling, Vertical Transport, Industrial
