

Vertical Machining Center

This vertical machining center is designed for precision metal cutting and shaping. Its rigid frame and multi-axis control system ensure accuracy and repeatability in various industrial applications.

Overview

Precision Vertical Machining Center

This vertical machining center is engineered for high-precision metal cutting and shaping tasks. It features a robust, rigid frame design that effectively minimizes vibration, ensuring consistent accuracy and repeatability across complex machining operations. Equipped with a fully enclosed workspace and a multi-axis control system, it provides a safe and versatile solution for demanding industrial applications.

Technical Specifications

Construction Features

- Rigid frame construction
- Vibration minimization
- Fully enclosed workspace
- Transparent monitoring door

Application Suitability

Industrial Use • High Precision • High Repeatability

Machining Capabilities

Precision Cutting, Metal Shaping, Multi-axis Control
