

Vertical Machining Center

This vertical machining center is designed for precision machining of various materials. It features a rigid structure, a high-speed spindle, and an advanced CNC control system for efficient production.

Overview

High-Speed Vertical Machining Center

The V6 high-speed machining center features a rigid gantry frame structure designed for superior stability and precision. Constructed with advanced marble material for the lathe bed and column base, it offers exceptional vibration damping, low thermal expansion, and high corrosion resistance. This machine is engineered to meet the demands of high-speed, efficient processing in mold and parts manufacturing.

Technical Specifications

Key Performance Metrics

0 Low

Thermal Expansion

1 High

Damping Performance

1 High

Corrosion Resistance

Core Machining Capabilities

Milling, Drilling, Tapping, High-speed processing

Construction Materials

Advanced marble material used for lathe bed and column base

Applications

Suitable Industries

- Mold Making
- Aerospace
- Automotive
- Precision Parts Manufacturing
