

Vertical Machining Center

This vertical machining center excels in precision milling, drilling, and tapping tasks. It features a rigid frame for enhanced stability and accuracy during automated machining processes via its CNC control system.

Product Overview

Precision Vertical Machining Center

This vertical machining center is engineered for high-precision milling, drilling, and tapping operations. Built with a rigid frame construction, it ensures exceptional stability and accuracy during heavy-duty cycles. The unit is fully equipped with an advanced CNC control system to streamline automated machining processes for diverse industrial component manufacturing.

Technical Specifications

Frame Construction

Rigid Frame

Model	KDR-6V
Primary Operations	Milling, Drilling, Tapping
Control System	CNC
