

Vertical Machining Center for Metal Cutting

The VMC8046 is a vertical machining center designed for precision metal cutting and shaping operations. It features a rigid frame construction for stability during high-speed machining.

Overview

High-Performance Vertical Machining Center

This vertical machining center is specifically engineered for high-precision metal cutting and shaping operations. Built with a robust, rigid frame, it ensures exceptional stability during high-speed machining tasks. Equipped with a high-speed spindle, an automatic tool changer, and a sophisticated CNC control system, it delivers efficient and accurate production for professional manufacturing environments.

Technical Capabilities

Key Performance Metrics

8000 RPM

Spindle Speed

Automation & Control

- Automatic Tool Changer
- Programmable CNC Control System

Suitable Applications

Mold Making, Die Casting, General Machining

Construction

Structural Design

Rigid frame construction optimized for high-speed machining stability.
