Vertical Milling Machine

This vertical milling machine is designed for precision metalworking. It features a robust cast iron frame, variable speed spindle, and multi-axis control for versatile machining operations.

Overview

Precision Vertical Milling Machine

This vertical milling machine is expertly engineered for high-precision metalworking applications. Built with a robust cast iron frame, it ensures stability and durability during heavy-duty operations. It features a variable speed spindle and multi-axis control, providing the versatility required for tool and die making, prototype development, and general machining tasks.

Technical Features

Construction Material	Cast Iron Frame
Spindle System	Variable Speed
Control System	Multi-axis control

Accessories & Equipment

Included Equipment	Coolant System, Work Light

Applications

Suitable Applications

- Tool and die making
- Prototype development
- General machining
