

Vertical Milling Machine

This vertical milling machine is designed for various milling operations, including face milling, slotting, drilling, and boring. It features a vertical spindle, a worktable with X, Y, and Z axis movement.

Overview

Versatile Milling Solution

The XZ6350 series vertical milling machine is a robust, high-performance tool engineered for precision metalworking applications. Its heavy-duty cast iron frame ensures stability during demanding tasks such as face milling, slotting, drilling, and boring. Equipped with a versatile vertical spindle and multi-axis manual and power-feed capabilities, it provides the reliability needed for professional manufacturing environments.

Technical Specifications

Key Capabilities

- Face Milling
- Slotting
- Drilling
- Boring

Machine Type	Vertical Milling Machine, XZ6350 Series
Axis Movement	Manual handwheels with integrated power feed capability

Features

Core Features

Cast Iron Construction • Integrated Coolant System • Multi-Axis Control • Centralized Control Panel
