

Vertical Plastic Material Dryer

This vertical plastic processing machine efficiently dries and preheats plastic materials. It features a cylindrical hopper with digital controls and a blower for effective drying in plastic processing.

Product Overview

Efficient Plastic Material Drying

This vertical plastic material dryer is engineered for optimal preheating and drying of plastic resins. Featuring a robust cylindrical hopper design with a conical base, it ensures consistent material flow and uniform heat distribution. The unit is equipped with an integrated blower and a user-friendly control panel, making it a reliable solution for various plastic processing applications.

Technical Specifications

Machine Type	Vertical Plastic Material Dryer
Primary Function	Drying, Preheating

Key Features

Design Features

- Cylindrical hopper design
- Conical base for material flow
- Transparent level indicator
- Integrated blower unit

Control System	Digital display and button interface
----------------	--------------------------------------
