

Vertical Plate Lifting Clamp

This vertical lifting clamp is designed for lifting and transporting steel plates and structures. It features a spring-loaded tightening lock mechanism for a secure grip and an adjustable jaw to accommodate various plate thicknesses.

Overview

Professional Vertical Lifting Solution

These vertical lifting clamps are engineered for the secure transport and lifting of steel plates, sheets, and structural components. Built with high-strength alloy steel, they offer exceptional durability and reliability for demanding industrial environments. The inclusion of a spring-loaded tightening lock mechanism ensures a consistent, secure grip, significantly reducing the risk of slippage during critical lifting operations.

Technical Specifications

Lifting Orientation	Vertical
Locking Mechanism	Spring-loaded tightening lock
Construction Material	High-strength alloy steel
Jaw Adjustability	Yes

Applications & Compliance

Safety Compliance

Meets Industry Standards

Suitable Industries	Construction, Shipbuilding, Manufacturing
